

How to clean the ice machines

- Fill a bucket with HOT & SOAPY WATER and wipe down the front and sides of both ice machines with a sponge
- Make sure to clean any small crevices that normally get neglected
- There are two filters which need to be cleaned (one is located on the front right of the larger ice machine, to get this out it simply slides out the top. The other is located on the front of the small one and again slides out) give these both a wipe over then slide it back in.
- Open the doors of both machines and wipe down the inside doors, make sure the sponge isn't too wet so it doesn't leave any soapy residue. There is a flap located on the door which MUST be lifted and wiped underneath
- In the back right on the inside of both machines there is a filter handle which needs to be wipe down as this is where the ice comes from.
- Once clean, go over with blue roll and dry everything off.

- **ONCE A MONTH (ON MONDAY OR SUNDAY) EMPTY OUT ALL ICE FROM THE MACHINES AND GIVE THEM A THOROUGH DEEP CLEAN**

Quiz on Ice Machine Cleaning:

1. Cleaning Solution: What type of water should be used to fill the bucket for wiping down the ice machines?
 - a) Cold water
 - b) Hot and soapy water
 - c) Ice-cold water
 - d) Lukewarm water
